

Do's & Don'ts of Bearing Usage

Do's

1. Do Always keep the bearing in Clean and dust free environment.
2. Do select the correct and proper tools for mounting.
3. Do check housing bore and shaft diameter for burrs and damages.
4. Do select the correct fit for the bearing on shaft and housing.
5. Do clean the bearing with white spirit only if contaminated with foreign matter.
6. Do lubricate rolling bearings with good quality and adequate quantity of grease.

Don'ts

1. Don't remove bearings from the carton until ready for mounting.
2. Don't Wash the new bearings.
3. Don't Use worn out tools.
4. Don't apply mounting force through rolling elements.
5. Don't Use cotton waste/cloth cuttings for cleaning bearings and related components.
6. Don't Use grease container without lid.
7. Don't fill too much grease in the bearings.
8. Don't Heat the bearing in a naked flame.
9. Don't expose bearings to atmospheric condition in case of incomplete job.
10. Don't Hammer the bearings to remove from the shaft.
